

SKB ROLL-X

Roll-X cases are rotationally molded using polyethylene plastic, have a depth of 17 3/4" and accommodate 19" rack mountable equipment.

They are available in 3, 4, 5 and 6 rack space models.

All models are available with 2.5" wheels, an industrial pull handle, and can be stacked together.

US Series Roto Rack

The US Series is the ultimate rackmount case

- roto molded tuff shell
- recessed heavy-duty twist latches
- molded in handles
- shock absorbing rubber feet and
- the recognizable patented deep Roto-X pattern for solid stackability

The unique molded-in unbendable valance and steel threaded rails with self tapping screws make the US Series racks convenient to use and the most durable.

Roto Shock Racks

SKB's new Roto Shock Racks feature a 20" deep rack frame installed in a roto molded tough shell with an integrally molded valance that eliminates the metal valance on the outside of the case, coupled with a rubber gasket on both the front and rear doors for water resistant protection.

The integrated molded valance, ergonomic handles, and recessed, heavy-duty twist latches allow these cases to meet most ATA and military specifications.

In addition to roto molded toughness and ATA ratings, new elastomeric shock technology has replaced the metal coil system to provide an increased level of protection to valuable equipment. Replacing the standard shocks with additional shocks can easily accommodate multiple weight bearing requirements.
