PROFESSIONAL LIGHTING CONTROL FOR CHURCHES, THEATRES AND CLUBS

STARPORT

BRILLIANT SHOWS ARE JUST A FEW CLICKS AWAY

**StarPort USB pictured above.

The StarPort turns any PC compatible computer into a full featured DMX memory lighting control console. A complete system consists of the USB port adaptor, software, and your computer. In a matter of minutes you can convert your computer into a lighting system with features found in very expensive lighting controllers. The StarPort is mouse driven. The mouse is used to set levels, start fades, and all other functions. The mouse is faster and easier to use than keypads and sliders on other consoles. Output to dimmers is DMX-512.

The StarPort has a DMX input to accept control from any DMX controller.
